Channel Security Engineer
F5 Networks

≫ SIGN ME UP ≪

Date: Thursday, October 10, 2019

Time: 10:00am – 3:00pm

Location: Region One Education Service Center
1900 W Schunior Street
Edinburg, Texas 78541

Credentials are the keys to your networks, your applications, and increasingly the API backend of those applications. Preventing unauthorized access is critical to protecting your intellectual property and your data.

Understanding how apps enable user access—and how apps can be compromised by attackers--can help you streamline processes and meet user expectations while also helping you prevent attacks.

Join Netsync & F5 for a hands-on lab where you'll learn the concepts of our Access Management solution and be guided through configuration steps for the following use cases:

- Remote access VPN services
- Web portals (Webtops) for publishing internal applications
- Using different authentication protocols
- Single-Sign-On (SSO) functionality
