Instructional Units

Unit 1: Computations, Algebraic Relationships, and Data Analysis

Subunit 1: Computations

Module 1: Add and Subtract Whole Numbers and Decimals

Subunit 2: Multiplication

Module 1: Strategies and Algorithms to Multiply Up to 1 by 4 Digits

Module 2: Area Models and Partial Products to Multiply 2 by 2 Digits

Module 3: Problem Solve by Multiplying 2 by 2 Digits

Subunit 3: Division

Module 1: Represent Division

Module 2: Standard Division

Subunit 4: Problem Solving

Module 1: One- and Two-Step Problems

Subunit 5: Multi-Step Problems

Module 1: Use the Four Operations

Subunit 6: Input and Output Tables

Module 1: Represent Problems Using Input and Output Tables

Subunit 7: Data Analysis

Module 1: Create, Interpret, and Analyze Data

TABLE OF CONTENTS

Unit 2: Geometry and Measurement
Subunit 1: Perimeter and Area
Module 1: Models and Problem Solve
Subunit 2: Lines and Angles
Module 1: Geometry Concepts
Subunit 3: Measurement of Angles
Module 1: Create and Measure
Module 2: Adjacent Angles
Subunit 4: Measurement
Module 1: Customary and Metric
Module 2: Conversions
Module 2: Time and Money
Unit 3: Numerical Representations and Relationships
Subunit 1: Whole Number Place Value
Module 1: Compare and Round
Subunit 2: Decimal Place Value
Module 1: Represent Place Value Using Models
Module 2: Compare Numbers
Module 3: Relate to Fractions and Number Lines
Subunit 3: Fractions
Module 1: Fraction Concepts
Module 2: Compare Fractions
Module 3: Add and Subtract Fractions
Unit 4: Personal Finance
Subunit 1: Fixed and Variable Expenses
Module 1: Classify Expenses
Subunit 2: Profit
Module 1: Calculate Profit

Appendix

District Mission:

"Our mission is to provide a quality educational experience that results in the development of socially responsible life-long learners."

District Goals:

Goal 1: Environment and Culture

The District will maintain a safe and positive school environment where students, parents, employees, and community members feel welcomed and engaged.

Goal 2: Academics

The District's academic programs will take the learning experience beyond state and federal standards in an effort to provide college and career readiness for all students.

Goal 3: Professional Learning

The District will provide professional learning opportunities that allow staff to achieve a higher level of proficiency.

Goal 4: Resources and Operations

The District will effectively manage its resources and operations to maximize the learning potential for all students.

PROFILE OF A GRADUATE

los fresnos consolidated independent school district **PROFILE of a GRADUATE**

Future-ready innovative thinkers and leaders

- Evaluate various sources of information and use sound reasoning when making decisions.
- Solve problems using logic, critical thinking, and deductive reasoning.
- Collaborate with others to build consensus and solve problems.
- Demonstrate perseverance and resilience.
- Embrace technology and creative solutions to everyday problems.

Effective communicators

- Listen and respond respectfully and empathetically.
 - Confidently adapt their communication style to the audience.
 - Use various medias to engage in productive and positive dialogue.
 - Collaborate with others to engage in courageous conversations.

Conscientious citizens

- Exhibit self-discipline, honesty, kindness, and integrity.
- Serve the community as role models and through volunteerism.
- Embrace diversity and cultural awareness.
- Value and participate in the democratic process.

Life-long learners

- Commit to continuous improvement.
- Demonstrate mastery of required curriculum and skills.
- Prepare for college and workforce opportunities.
- Develop personal and professional goals that lead to a healthy, balanced lifestyle.

Content Vision:

At Los Fresnos CISD, our vision is to work in unison and be committed toward providing students with equitable, purposeful, rigorous, and engaging math instruction that will prepare them for the workforce. Ambitious expectations exist for all students, with accommodations for those who need it. The LFCISD Mathematics Curriculum will prepare students to be confident and self-motivated problem-solvers who can collaborate in an ethical manner in order to successfully apply mathematics in their personal and professional life. It is mathematically rich, offering students opportunities to learn important mathematical concepts and procedures with understanding. Both teacher and student value mathematics and actively engage in learning it.

Content Characteristics:

Teacher Behaviors: Teachers demonstrate acceptance of students' divergent ideas and challenge students to think deeply about the problems they are solving, reaching beyond the solutions and algorithms required to solve the problem. By doing this, the teacher ensures that students are explaining both how they found their solution and why they chose a particular method. Teachers influence learning by posing challenging and interesting questions that not only stimulate students' innate curiosity but also encourage them to investigate further.

Teachers instruct for conceptual understanding, developing children's procedural literacy, and promoting strategic competence through meaningful problem-solving investigations.

Teachers present topics in a sequence and manner appropriate for the developmental level of the students.

The teacher constantly builds students' sense of efficacy and instills in his or her students a belief that the goal of "doing mathematics" is attainable and that they are personally capable of reaching that goal.

CONTENT VISION AND CHARACTERISTICS

The teacher differentiates instruction through the use of tiered assignments and varying question levels. Scaffolding is practiced to make connections to concepts, procedures, and understanding as well as using students' experiences and prior knowledge to build new knowledge.

Student Behaviors: Students are actively engaged in doing mathematics. They are metaphorically rolling up their sleeves and "doing mathematics" themselves, not watching others do the mathematics for them or in front of them.

Students are solving challenging problems. They are investigating meaningful real-world problems whenever possible. Mathematics is not a stagnant field of textbook problems; rather, it is a dynamic way of constructing meaning about the world around us, generating new knowledge and understanding about the real world every day.

Students are making interdisciplinary connections. Mathematics is not a field that exists in isolation. They learn best when they connect mathematics to other disciplines, including art, architecture, science, health, and literature. Such connections help students develop an understanding of the academic vocabulary required to "do mathematics" and connect the language of mathematical ideas with numerical representations.

SOLVE PROBLEMS ANALYZE DATA EXPLAIN THEIR THINKING CHECK THEIR WORK PERSEVERE MAKE MODELS USE APPROPRIATE TOOLS THINK ABSTRACTLY MAKE CONNECTIONS ATTEND TO PRECISION THINK CRITICALLY FIND PATTERNS APPLY PRIOR KNOWLEDGE ESTIMATE

Students are sharing mathematical ideas. It is essential that they have the opportunity to discuss mathematics with one another, refining and critiquing each other's ideas and understandings. Communication can occur through paired work, small group work, or class presentations.

CONTENT VISION AND CHARACTERISTICS

Students are using multiple representations to communicate mathematical ideas. They should have multiple opportunities to use a variety of representations to communicate their mathematical ideas, including drawing a picture, writing in a journal, or engaging in meaningful whole-class discussions.

Students are using manipulatives and other tools. In the beginning stages of a new concept, they are just beginning to develop their sense of abstract reasoning. Concrete models, such as manipulatives, can provide them with a way to bridge from the concrete understandings of mathematics to the abstract understandings that will be required of them as they further explore the mathematical concepts.

Environment: The math classrooms have goals defined for students. The daily objectives are listed in the classroom along with the teachers explaining the expectations for the day's learning to let students know what they need to learn for the day. In the math classroom, students are aware of daily routines and expectations.

The math classrooms have students working in different types of groups and individually. The classroom setup is flexible enough to allow students to work with the teacher for instruction or with a partner playing a game. Places set up in the classroom for individual work as well as group work are important.

The teacher circulates in the classroom as the children work together on cooperative problems and games or work individually on concepts and math fluency to help promote an effective and safe environment. Many voices are part of the conversation, and every student feels that they have something unique to contribute. Thorough and detailed feedback is rich with both positive commendations and recommendations. Mistakes are embraced and treated as rich learning opportunities. A growth mindset permeates the atmosphere.

Course Overview: The primary focal areas in Grade 4 are use of operations, fractions, and decimals and describing and analyzing geometry and measurement. These focal areas are supported throughout the mathematical strands of number and operations, algebraic reasoning, geometry and measurement, and data analysis. In Grades 3-5, the number set is limited to positive rational numbers. In number and operations, students will apply place value and represent points on a number line that correspond to a given fraction or terminating decimal. In algebraic reasoning, students will represent and solve multi-step problems involving the four operations with whole numbers with expressions and equations and generate and analyze patterns. In geometry and measurement, students will classify two-dimensional figures, measure angles, and convert units of measure. In data analysis, students will represent and interpret data.

TEA Documents:

- **TEA Texas Essential Knowledge and Skills (TEKS)**: This TEA webpage provides information on the state standards for what students should know and be able to do for this course.
- **<u>TEA Vertical Alignment Document</u>**: This TEA webpage provides information on content standard alignment across the grade levels.
- <u>STAAR Assessed Curriculum</u> <u>English</u> | <u>Spanish</u>: This TEA document identifies TEKS eligible for testing and identifies them by Reporting Category and as Readiness or Supporting Standards.
- <u>STAAR Blueprint</u> <u>English</u> | <u>Spanish</u>: This TEA document identifies the number of STAAR questions asked per Reporting Category.
- **STAAR Released Questions** English | Spanish: This TEA webpage provides sample test questions from the STAAR Item Bank that may or may not have previously been administered. Also included are test forms, which is a set of released questions, previously administered together which reflects the STAAR test blueprints.

Lead4ward Documents:

• <u>Lead4ward TEKS Snapshot</u>: This is a PDF file that color coordinates and divides the readiness, supporting, and process standards for each grade level and content area. (Find 4th grade and click on Math under the Snapshot column)

COURSE OVERVIEW DOCUMENTS

- Lead4ward TEKS Scaffold: This document shows all of the related TEKS that build up to and extend the learning clustered by concept. (Find 4th grade and click on Math under the Scaffold column)
- <u>Lead4ward Academic Vocabulary</u>: This document shows important vocabulary for concept development, including new and previously introduced words. (Find 4th grade and click on Math under the Academic Vocab column)
- <u>Lead4ward Instructional Strategies Playlist</u>: This document provides descriptions of instructional strategies to engage learners, provide practice without penalty, encourage interaction among students, and see and hear students' thinking across contents. (Located on the Instructional Tools tab)
- <u>Lead4ward Frequency Distribution</u>: This document provides the number of times a TEKS was tested over the past four test administrations. (Click on the Data Tools tab)
- Lead4ward IQ Released Item Analysis Tool: This document breaks down STAAR Released questions and helps teachers to conduct error analysis based on state and local data. (Click on IQ Button on top of Content Builder Resources tab)
- Lead4ward Field Guides: The Field Guides for Teachers succinctly organizes the information teachers and PLCs need to effectively plan meaningful instruction for students. These are purchased for every campus by the district and require login information. Please do not print, as documents are frequently updated.
- Lead4ward Learning Videos: These are short videos that explain how to use the resources listed above. (Click on the Learning Videos tab)

The YAG informs all stakeholders of the learning concepts presented throughout this course. Teachers use this overview to create daily lessons that meet the unique needs of their students.

Unit I: Computations, Algebraic Relationships, and Data Analysis (10 Weeks) Unit Description:

In Unit I, students will apply mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student will also apply mathematical process standards to develop concepts of expressions and equations. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data.

Mastery Learning Objectives:	Essential Questions:
 Demonstrate an understanding of how to perform operations, represent algebraic relationships, and analyze data. Use mathematical processes to acquire and demonstrate mathematical understanding. ELPS: The students will develop their receptive and expressive skills. (reading, writing, speaking, and listening) 	 How do you use a problem solving model that incorporates analyzing given information, formulate a plan, determine a solution, and justify the solution? How can I apply mathematics to problems arising in everyday life, society and the workplace? How can I create and use representations to organize, record, and communicate mathematical ideas?

<u>Real World/Cross-Curricular Connections</u>:

- Have students research different professions in which math is used to be able to perform the job. For instance, a chef, an architect, someone in computer science, etc.
- Discuss how every ten years the U.S. Census counts every citizen and all data that is collected is analyzed and represented in different graphs.
- To help students understand which computation to use, post large, blank strip diagrams on a bulletin board so students can select the most appropriate one from the options.
- Provide constant opportunities for students to translate word problems to strip diagrams and equations and relate the context of the problems to real life.

Subunit 1 of 7 (5 Days): Computations

Subunit Description:

- use standard algorithm to add and subtract whole numbers
- use standard algorithm to add and subtract decimal numbers to the hundredths place

Before	Now	After
 solve with fluency one-step and two-step problems involving addition and subtraction within 1,000 using strategies based on place value, properties of operations, and the relationship between addition and subtraction (3.4A) 	• add and subtract whole numbers and decimals to the hundredths place using the standard algorithm (4.4A)	 add and subtract positive rational numbers fluently (5.3K) estimate to determine solutions to mathematical and real-world problems involving addition, subtraction, multiplication, or division (5.3A)
	Materials/Texts/Resources:	
	(* available in Spanish)	
 TX Go Math* TEKSas Target Board Imagine Math* Reflex Math* Education Galaxy Fast Focus* (recommended) Gauntlet* (recommended) Math Solutions Activities <i>Think Up**</i> 	()	
Recommended Manipulatives	S	
• Base ten blocks		
• Dice		
• Deck of cards		
• Dominoes		
If available on campus**		

	Module 1 of 1 (5 Days):
	Add and Subtract Whole Numbers and Decimals
ocess	4.4A add and subtract whole numbers and decimals to the hundredths place using the standard algorithm (R)
S rting, (P) Pro	English Language Proficiency Standards
TEK ss, (S) Suppo	The student uses mathematical processes to acquire and demonstrate mathematical understanding.
(R) Readine	Process Standards: 4.1A, 4.1B, 4.1C, 4.1D, 4.1E, 4.1F
ge	The Learner Will (TLW):
nd Langua; ectives	• use the standard algorithm to demonstrate an understanding of addition and subtraction of whole numbers and decimals
Content an Obio	Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals
ceptions	 Not aligning the appropriate place values when adding/subtracting decimals Not understanding adding and subtracting decimals as joining and separating parts of the same whole
Miscond	• Not understanding the context of the problem and missing a step when multiple quantities are involved (e.g., Josh bought 1 soda and 2 candy bars. The soda cost \$1.29 and the candy bars cost \$1.15 each. What was the total cost?)
ctions	 Students need to correctly align place-value positions when adding and subtracting numbers.
Conne	• Explain that hundredths can be subtracted from tenths by expressing the tenths as hundredths, or writing a zero after the digit in the tenths place (Eg., 0.9 - 0.87 is the same as 0.90 - 0.87)
Content	• Be sure to vary the context of the problems.

• Online Games

<u>Rags to Riches Adding Decimals</u> <u>Decimal Mania – Addition and Subtraction</u> <u>Soccer Math – Adding Decimals Game</u>

• Differentiated Instruction

• **GT/ Extensions:** Have students use store receipts to write word problems for other students to solve. Encourage them to select items that have different numbers of digits.

Think Up SE pg. 154- Math Challenge

Think Up TE pg. 190- Students create restaurant menus, including pictures and prices for the items. Students may draw pictures, cut pictures from magazines, or print pictures from electronic sources. Students prepare a possible bill for a customer by listing items ordered with a total spent. Students share the menu and bill with the class.

• Interventions: Have students use decimal models to work addition and subtraction problems. Show them how to shade units (squares) in a 10x10 grid to represent decimals.

Show number line, counting on, and strip diagrams. <u>Teachley Add and Subtract</u> Video

EBs: <u>Strategy</u>- Model Concepts Materials- Base-ten blocks
 Use base-ten blocks to model addition with regrouping.

-Read the problem and model how to solve it, showing how to regroup 14 ones

as 1 ten 4 ones.
There are 118 children at the concert. There are 446 adults at
the concert. How many people are at the concert?
-Read the problem again. Have students use base-ten blocks to solve the
problem. Then have them say or write the answer. 564
Strategy- Creative Grouping Materials- Index cards, markers
-Group beginning and intermediate English Learners with advanced English
Learners to help with language practice.
-Have students write decimal numbers on index cards.
-Have students choose two cards, write the numbers, and explain the steps to
subtract the decimals.
-Make sure students explain how 0.3 is equivalent to 0.30.
5.6 0.41 3.02 14.1

Linguistic Accommodations

Checking for Understanding

- I must align according to the place value because...
- If I had a \$10 and bought a juice for 1.97, I could determine my change by...
- When adding 1 tenth and 1 hundredth, I must remember...
- Adding whole numbers and adding decimals are similar/different because...

Learning Intentions for Emergent Bilinguals

Sample Assessment Items

Samples from Lead4ward TEKS 4.4A

21 Kristine has a \$10 bill to spend at a book fair. She buys one book for \$4.95, two bookmarks for \$0.65 each, and a key chain for \$1.85.

How much change should Kristine receive from her \$10 bill?

- **A** \$2.55
- **B** \$2.10
- **C** \$3.45
- **D** \$1.90

2016 – Q15

15 The list shows the number of trees Isaiah planted in three years.

- He planted 521 trees in the first year.
- He planted 387 trees in the second year.
- He planted 438 trees in the third year.

Isaiah wants to plant a total of 2,000 trees. How many more trees does Isaiah need to plant?

- **A** 654
- **B** 1,346
- **C** 874
- **D** 764

Evidence of Learning

Subunit 2 of 7 (15 Days): Multiplication Subunit Description:

- determine products of numbers multiplied by 10 or 100
- **represent** the product of numbers using arrays, area models, and equations
- multiply up to four-digit numbers by one-digit using strategies and algorithms
- multiply two-digit by two-digit numbers using strategies and algorithms

Before	Now	After
 represent multiplication facts by using a variety of approaches such as repeated addition, equal sized groups, arrays, area models, equal jumps on a number line, and skip counting. (3.4E) recall facts to multiply up to 10 by 10 with automaticity and recall the corresponding division facts (3.4F) use strategies and algorithms, including the standard algorithm, to multiply a two-digit number by a one-digit number (3.4G) 	 4.4B determine products of a number and 10 or 100 using properties of operations and place value understandings (4.4B) use strategies and algorithms, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number and represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15 (4.4DC) 	• multiply with fluency a three- digit number by a two-digit number using the standard algorithm (5.3B)
	<u>Materials/Texts/Resources:</u> (* available in Spanish)

	Module 1 of 3 (5 Days):			
	Strategies and Algorithms to Multiply Up to 1 by 4 Digits			
TEKS (R) Readiness, (S) Supporting, (P) Process	 4.4B determine products of a number and 10 or 100 using properties of operations and place value understandings (S) 4.4D use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties (S) 4.4C represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15 (S) English Language Proficiency Standards The student uses mathematical processes to acquire and demonstrate mathematical understanding 			
	understanding. Process Standards: 41A 41B 41C 41D 41E 41E			
	<i>The Learner Will (TLW):</i>			
Content and Language Objectives	 represent multiplication using arrays, area models, and equations use strategies and algorithms to multiply one-digit by up to four-digit numbers Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals 			
Misconceptions	 Using the standard algorithm as an efficient means to find the product of a number and 10 or 100 Reverting to past experience with base-ten models and using them to add instead of multiply Not connecting multiplication with area Forgetting to add a regrouped digit or adding the regrouped digit and then multiplying by that sum 			

	• Recognizing patterns in multiplying by 10 or 100 supports students in developing
	multiplication/division algorithms and being able to estimate products/quotients
	of multiplication/division problems.
ons	• The automaticity of multiplying by 10 and 100 is essential for the development of
ecti	strategies/algorithms for multiplying multiple-digit numbers
nne	• This standard (4.4C) builds the conceptual knowledge of two-digit multiplication.
Co	Stu- dents should use a variety of methods to represent their understanding:
ent	arrays, area models, and equations.
ont	• Instruction should include examples of perfect squares where the two factors are
C	the same value (e.g., 12 x 12).
	• The use of mental math, partial products, and operational properties allows
	students to build their flexibility in the use of numbers. It is imperative to relate
	those actions to the steps found in the standard algorithm.

T ise	multiplying by that sum
Content Connections	 It is critical for students to develop their flexibility with multiplying multi-digit numbers by employing different strategies before moving to the abstract understanding of the standard algorithm. This supporting standard (4.4D) provides that development progression. The use of mental math, partial products, and operational properties allows students to build their flexibility in the use of numbers (e.g., 23 x 12 = (20 + 3) x (10 + 2) = (20 x 10) + (20 x 2) + (3 x 10) + (3 x 2) = 200 + 40 + 30 + 6 = 276). It is imperative to relate those actions to the steps found in the standard algorithm. Encourage students to demonstrate their understanding in more than one way.

	Module 1 of 2 (5 Days): Represent Division
TEKS diness, (S) Supporting, (P) Process	4.4E represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations (S) English Language Proficiency Standards The student uses mathematical processes to acquire and demonstrate mathematical understanding.
(R) Rea	Process Standards: 4.1A, 4.1C, 4.1D, 4.1E, 4.1F, 4.1G
Content and Language Objectives	 <i>The Learner Will (TLW):</i> use arrays, area models, or equations to represent quotients of up to four-digit whole number divides by one-digit whole number verbally explain strategies used to represent quotients Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals
Misconceptions	 Reverting to past experience with base-ten models and using them to add instead of multiply Failing to see the inverse relationship between multiplication and division when working with different representations Ignoring place value and/or misjudging work alignment in columns for division equations Not recognizing the need to preserve place value in the quotient, especially when the dividend includes a zero

- It is critical for students to develop the conceptual understanding of division of multi-digit numbers before moving to the abstract understanding of the standard algorithm.
- Equations can include the use of partial quotients.

- Students represent the quotient using arrays and area models by connecting the factors as length and width and the product as the area.
- Limit instruction to division of four-digit by one-digit.
- It is critical for students to develop an efficient way to divide multi-digit numbers by a one-digit divisor. This learning extends to interpreting the remainder in a division problem.
- Watch for students who may be confused by the action of repeatedly removing equal groups and recording the number of groups removed.
- Use place value language when referring to the dividends (e.g. For 312 divided by 6 refer to dividing 31 tens by 6 rather than 31 by 6)
- When introducing long division, ask students to record a multiplication expression next to the number being subtracted.

• **GT/ Extensions:** Think Up! TE Pg. 274 <u>Extending Student Thinking</u>

• Interventions:

Think Up! TE pg. 272

Distribute copies of word problems to students. Guide them through the problems one at a time. First, replace the numbers in the problem with numbers that make it easy for students to act out the situation in the problem. Discuss the operations needed to solve the problem. Student may create a sketch to solve a problem.

- EBs: Strategy- Creative Grouping
 - Pair advanced English learners or students who are fluent in English with beginning and intermediate English learners.
 - Have them read a division story problem together and discuss how to interpret the answer. Make sure English learners can explain how to interpret the answer with words or drawings.
 - Students find the answer to the story problem using multiples, counters, or a quick picture to divide. Encourage students to discuss which method they prefer and why.

Linguistic Accommodations

Checking for Understanding

- How can you use remainders in division problems? •
- How can you use compatible numbers to estimate quotients? •
- How does using estimation makes it easier to solve multiplication and division • problems?

Learning Intentions for Emergent Bilinguals

Sample Assessment Items

2017 – Q28

28 Valerie had a jug that contained 128 fl oz of salsa to put into bowls at a restaurant. She filled each bowl with 6 fl oz of salsa until there was not enough salsa left in the jug to completely fill another bowl.

How many fluid ounces of salsa were left in the jug?

- F 22 fl oz
- G 21 fl oz
- H 122 fl oz
- J 2 fl oz

2017 - 024

24 The table shows the number of cartons of milk the school cafeteria sold each day last week.

Milk		
Day	Number of Cartons Sold	
Monday	352	
Tuesday	426	
Wednesday	449	
Thursday	373	
Friday	402	

Which of these is the best estimate of the number of cartons of milk the cafeteria sold last week?

- F 400
- G 1,800
- H 2,000
- J 2,500

Subunit 5 of 7 (5 Days): Multi-Step Problems <u>Subunit Description</u>:

- **represent** multi-step problems involving the four operations
- use strip diagrams and equations when representing multi-step word problems

resent multi-step problems plving the four operations with	• represent and solve multi-ste	n
grams and equations with a er standing for the unknown ntity 4.5A	operations with whole number using equations with a letter standing for the unknown quantities 5.4B	ers
rials/Texts/Resources:		
wailable in Spanish)		
	string the four operations with ole numbers using strip grams and equations with a er standing for the unknown ntity 4.5A rials/Texts/Resources: wailable in Spanish)	problems involving the four operations with prams and equations with a er standing for the unknown ntity 4.5A <u>rials/Texts/Resources:</u> vailable in Spanish)

Module 1 of 1 (5 Days):			
	Use the Four Operations		
TEKS Readiness, (S) Supporting, (P) Process	 4.4H solve with fluency one- and two-step problems involving multiplication and division, including interpreting remainders (R) 4.5A represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity (R) English Language Proficiency Standards The student uses mathematical processes to acquire and demonstrate mathematical 		
(R)	understanding.		
Process Standards: 4.1A, 4.1B, 4.1C, 4.1D, 4.1E, 4.1F			
Content and Language Objectives	 <i>The Learner Will (TLW):</i> <i>select</i> appropriate operations to <i>solve</i> multi-step problems using strip diagrams, writing equations and using variables for unknown numbers. Student linguistic accommodations should reflect listening, speaking, reading, and writing. <u>Learning Intentions for Emergent Bilinguals</u> 		
conceptions	 Not understanding the context of the problem and incorrectly representing the expression/equation (e.g., there are two times as many girls than boys in the classroom; 2 x B = G not 2 x G = B) Trying to apply "key words" to select the appropriate operation instead of understanding the context of the problem 		
Misc	 Confusing the relationship of parts with the total when representing with strip diagrams 		

Content Connections	 Watch for students who are able to represent a problem with a strip diagram but are not able to translate the model to an equation. Be aware that students may consistently associate language with specific operations. Point out that students need to consider the context of the problem, not specific words, before determining which operations to use. Post large, blank strip diagrams on a bulletin board so that students can select the most appropriate one from the options. Provide opportunities for students to translate strip diagrams to equations.
Academic Vocabulary *new to grade level	 Difference Equation Expression Product Quotient Strip diagram Sum Variable

	(R) R6	understanding.	
	-	Process Standards: 5.1C, 5.1D, 5.1E	
ge		The Learner Will (TLW):	
Content and Langua	Objectives	 record and interpret data, including fractional value on a frequency table, stem and leaf and dot plot. Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals 	

	•	When using the stem-and-leaf plot, having difficulty determining what values represent the stem and leaf*
Misconceptions	•	When using the stem-and-leaf plot, not representing repeated values (e.g., math grades: 84, 56, 92, 84, 87, 91; students may only reflect 84 one time on the graph when the value of 84 needs to be recorded twice)
	•	When representing the same set of data on all three types of graphs, interpreting the data as different be- cause of the difference in the visual representations • When representing the same set of data vertically and horizontally, interpreting the data as different because of the difference in the visual representations
	•	Including a 0 as a leaf in a stem-and-leaf plot when there are no values for the respective stem; not including a 0 as a leaf in a stem-and-leaf plot when there are values for the respective stem • Not representing zero as data on a dot plot
	•	When using a frequency table, having difficulty representing data within a span of data (i.e. between 0-5, 6-10, 11-15, etc.)*
	•	Not being able to represent data on a scaled dot plot where in-between intervals may not be labeled*
	•	Demonstrate how one set of data can be displayed in a variety of ways.
SI	•	Personalizing such activities al- lows students to understand and make more sense of the data and summarize more appropriately
Content Connection	•	Data should be represented on a frequency table, dot plot, or stem-and-leaf plot. Instruction should begin with frequency tables and dot plots, as students should have had previous experience with those representations
	•	Students may need more support with the development of stem-and-leaf plots. This type of graph distributes the data by separating one place value from the other or the parts from the whole when working with fractions
	•	Instruction should include representing the same set of data on all three types of graphs.

Stem Leaf			
8	48		
9	068		
10	5 5		
11	7		
9 6 means 96 tickets.			

What is the total number of tickets that Stephen won at the carnival?

- **A** 783
- **B** 178
- **C** 81
- **D** 678

Unit II: Geometry and Measurement (8 Weeks) Unit Description:

In Unit 2, students will apply mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student will also apply mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and use tools to solve problems involving measurement and solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate.

Mastery Learning Objectives:	Essential Questions:		
• The student applies mathematical	• What information is given in the problem?		
process standards to develop	What picture might you draw to help solve		
concepts of expressions and	the problem?		
equations.	• How would you use perimeter.		
• ELPS: The students will develop	area, units of measure, and		
their receptive and expressive skills.	your knowledge of angles to		
(reading, writing, speaking, and	create/design floor plans?		
Real World/Cross-Curricular Connections:			

• Create a floor plan for your dream house. Implement what you have learned throughout this unit to help with your design. In your design, identify the area and perimeter where necessary, locate any right angles, obtuse angles, acute angles, parallel lines, perpendicular lines, lines of symmetry. Identify any units of measure and tools used to measure.

Subunit 1 of 4 (5 Days): Perimeter and Area <u>Subunit Description</u>:

- solve problems related to perimeter and area
- **use** models to determine formulas for perimeter and area

Before	Now	After	
• determine the perimeter of a polygon or a missing length when given perimeter and remaining side lengths in problems 3.6(C) determine the area of rectangles with whole number side lengths in problems using multiplication related to the number of rows times the number of unit squares in each row 3.7(B)	• Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to: (D) solve problems related to perimeter and area of rectangles where dimensions are whole numbers 4.5 (D)	• represent and solve problems related to perimeter and/or area and related to volume 5.4(H)

	Module 1 of 1 (5 Days):
	Geometry Concepts
s, (P) Process	 4.6A identify points, lines, line segments, rays, angles, and perpendicular and parallel lines (S) 4.6B identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure (S) 4.6C apply knowledge of right angles to identify acute, right, and obtuse triangles (S)
TEKS (S) Supporting	4.6D classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size (R)
) Readiness,	English Language Proficiency Standards
(R	The student uses mathematical processes to acquire and demonstrate mathematical
	understanding.
	Process Standards: 4.1A, 4.1B, 4.1C, 4.1D, 4.1E, 4.1F, 4.1G
Content and Language Objectives	 classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size identify points, lines, line segments, rays, angles, and perpendicular and parallel lines identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals

	• When identifying parallel lines, not understanding that the lines do not have to be equal in length nor be shown directly above/below each other
MIRCONCEPTIONS	• Struggling with visualizing geometric figures with given attributes when pictures or images are not provided
	• Identifying polygons by the way they look instead of by attributes (e.g., not being able to identify a right trapezoid as a type of trapezoid)
	• Not recognizing a quadrilateral as having more than one classification (e.g., a square is also a polygon, rectangle, parallelogram, quadrilateral, rhombus
	• Overgeneralizing that all intersecting lines are perpendicular
	• Not realizing that parallel lines can be different sizes and need not be directly next to each other
	• Not differentiating between an angle and a ray (e.g., seeing all rays as angles and/or vice versa)
	• Not differentiating between a line and a line segment
	• Not realizing that some figures have more than one line of symmetry; especially diagonal lines of symmetry
	• Misreading the angles on a triangle and selecting the wrong angle measure to name the triangle
	• Misidentifying angles on a rotated polygon
0	• All parallelograms can be called quadrilaterals because they have four sides and four angles, but cannot all be called rectangles because not all parallelograms have four right angles.
	• A trapezoid can be called a quadrilateral because it has four sides and four angles, but cannot be called a parallelogram because it only has one set of parallel sides.
	• Students must identify and physically draw lines of symmetry. The standard limits the figures to two-dimensional; however, instruction should include regular and irregular two-dimensional shapes. Encourage students to identify and draw more than one line of symmetry, should more than one exist.
	• Remind students that a line of symmetry divides a figure into two figures that match if folded on the line

	Create and Measure
	 4.6C apply knowledge of right angles to identify acute, right, and obtuse triangles (S) 4.7C determine the approximate measures of angles in degrees to the nearest whole number using a protractor (R) 4.7D draw an angle with a given measure (S)
TEKS (R) Readiness, (S) Supporting, (P) Process	 4.7A Illustrate the measure of an angle as the part of a circle whose center is at the vertex of the angle that is "cut out" by the rays of the angle. Angle measures are limited to whole numbers. <i>(not assessed)</i> 4.7B Illustrate degrees as the units used to measure an angle, where 1/360 of any circle is 1 degree and an angle that "cuts" n/360 out of any circle whose center is at the angle's vertex has a measure of n degrees. Angle measures are limited to whole numbers. <i>(not assessed)</i> English Language Proficiency Standards The student uses mathematical processes to acquire and demonstrate mathematical
	understanding. Process Standards: 4.1A, 1B, 1C, 1D, 1E, 1E, 1C
e	The Learner Will (TLW):
Content and Language Objectives	 apply knowledge of right angles to identify acute, right, and obtuse triangles determine the approximate measures of angles in degrees to the nearest whole number using a protractor will draw an angle with a given measure Student linguistic accommodations should reflect listening, speaking, reading, and writing. I corrige latentions for Energy Philip grade
Content and Lar Objectives	 apply knowledge of right angles to identify acute, right, and obtuse triangles determine the approximate measures of angles in degrees to the nearest whole number using a protractor will draw an angle with a given measure Student linguistic accommodations should reflect listening, speaking, reading, writing. Learning Intentions for Emergent Bilinguals

•	Misreading the angles on a triangle and selecting the wrong angle measure to
	name the triangle*

- Misidentifying angles on a rotated polygon*
- Reading the wrong scale of the protractor (if students are not identifying whether a measurable angle is acute or obtuse)
- Having difficulty manipulating a protractor to align rays that may be rotated
- Thinking the length of the rays relate to the size of the angle measure
- When given an image of a protractor that does not align at the zero edge, looking at where a ray intersects the protractor rather than calculating the angle measure
- Misidentifying the type of the angle to be drawn (e.g., when asked to draw a 35degree angle, not being able to visualize an acute angle)
- Misaligning the zero edge of the protractor

Misconceptions

Content Connections

- Using the wrong scale of the protractor (if students are not identifying whether a measurable angle is acute or obtuse)
- Students should realize that all triangles are named according to their largest angle
- Just like a ruler can measure length in inches or a clock can measure time in minutes/hours, a protractor can measure angles in degrees.
- Instruction should identify the different components of a protractor (inner scale, outer scale, center mark, zero edge).
- In conjunction with 4.6(C), students should first identify a given angle as acute or obtuse and then estimate an angle measurement prior to actually measuring. Instruction should model how to place the center of the protractor on the vertex of the angle and align the zero edge of the pro- tractor with one of the rays of the angle.
- Students should notice how the protractor represents a half of a circle or 180°.
- Instruction should also include the use of images of a protractor and a given angle to determine the measure of the angle. Examples may or may not align to the zero edge of the protractor.

Sample Assessment Items

4.6C STAAR Item

2017 - Q29

- 29 Lela made a triangle that had one 90° angle and two acute angles. Which term describes Lela's triangle?
 - A Right triangle, because there is one 90° angle
 - B Acute triangle, because there are two acute angles
 - C Obtuse triangle, because the largest angle is obtuse
 - D Right triangle, because all three angles are 90°

4.7C STAAR Item

Evidence of Learning

	Module 2 of 2 (5 Days): Adjacent Angles
0	4.7E determine the measure of an unknown angle formed by two non-overlapping
ing, (P	adjacent angles given one or both angle measures.
FEKS s, (S) Support	English Language Proficiency Standards
] adines	The student uses mathematical processes to acquire and demonstrate mathematical
R) Re	understanding.
0	Process Standards: 4.1A, 1B, 1C, 1D, 1E, 1F, 1G
'es	The Learner Will (TLW):
Content and Language Objectiv	 determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures. Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals
tions	 Not realizing that a right angle (or the square symbol for a right angle) measures 90 degrees*
cept	• Not realizing that a straight angle (line) measures 180 degrees
Miscon	• Watch for students who may be confused about which operation to use

	• Instruction should define and provide examples and non-examples of non- overlapping adjacent angles.
	• Adjacent angles are to be defined as two angles that do not overlap but share a common ray and a common point (vertex).
Ś	• Students should begin to visualize how two adjacent angles yield a larger angle.
Content Connection	• As students begin to determine the measure of unknown angles, be sure to vary the context of the problems. This understanding begins to lay the foundation for supplementary and complementary angle measurements.
	• Given two adjacent angles, determine the measurement of the larger angle.
	• Given the measurement of the larger angle and one of the adjacent angles, determine the measurement of the other adjacent angle.
	• Given that the larger angle is a right angle and the measure of one of the adjacent angles, determine the measure of the other adjacent angle.
	• Given that the larger angle represents half of a circle and the measure of one of the adjacent angles, determine the measure of the other adjacent angle.

Module 1 of 3 (5 Days):					
	Customary and Metric				
(4.8A identify relative sizes of measurement units within the customary and metric				
ng, (P	systems (S)				
FEKS ss, (S) Supporti Process	English Language Proficiency Standards				
] adines	The student uses mathematical processes to acquire and demonstrate mathematical				
R) Re	understanding.				
•	Process Standards: 4.1A, 1B, 1C, 1D, 1E, 1F, 1G				
e	The Learner Will (TLW):				
uag	• identify relative sizes of measurement units within the customary and metric				
s: S	systems				
and La bjective	• select appropriate customary and metric units, strategies, and tools to solve problems involving measurement				
Content O	• Student linguistic accommodations should reflect listening, speaking, reading, and writing. Learning Intentions for Emergent Bilinguals				
tions	• Difficulty associating a benchmark with a given measurement (e.g., a color tile is approximately an inch in length; an M & M weighs approximately a gram; a jug of milk is approximately a gallon)				
sconcep	• Not being able to identify similar objects of relative sizes (e.g., one M & M has a mass of one gram which is much more than the mass of one jelly bean)				
Mi	• Be aware that students may not know which unit of measurement to use when measuring.				

Content Connections	 In measurement, students need a point of reference to identify the relative size of measurement units. Benchmarks need to be provided for both customary and metric (e.g., an inch is about the length of the bend of my index finger, a centimeter is the length of a unit cube in the base ten blocks, a foot is the length of a ruler, a decimeter is the length of a ten long in the base ten blocks). Relative size needs to be applied to length (e.g., an inch is about the length of the bend of my index finger), capacity/liquid volume (e.g., a gallon can relate to a jug of milk), and mass (one M&M candy is approximately one gram). This understanding allows students to better estimate and/or apply reasonableness to solutions.
