

**UPDATES ON CAS
ASSESSMENT AND TREATMENT**

Region 10 Education Service Center
Richardson, TX
May 19, 2023

Sue Caspari, MA, CCC/SLP

Temple University

1

DISCLOSURES

- Nonfinancial:
 - Ms. Caspari has provided video examples of herself using the Dynamic Evaluation of Motor Speech Skill (DEMSS) which are included in the DEMSS training manual. She has no financial affiliation with the assessment tool.
 - Ms. Caspari is a professional advisory board member of the Apraxia Kids organization and receives no compensation as a board member.
- Financial:
 - Ms. Caspari is receiving a stipend for today's presentation from Region 10 Education Service Center.
 - Ms. Caspari receives funds as a co-investigator on an NIH-funded study researching motor-based treatment for children with CAS at Temple University.
 - Ms. Caspari owns, operates, and receives compensation for a private practice (Caspari & Colleagues).
 - Ms. Caspari receives honoraria for various invited speaking engagements.

2

**CHILDHOOD APRAXIA OF
SPEECH (CAS)**

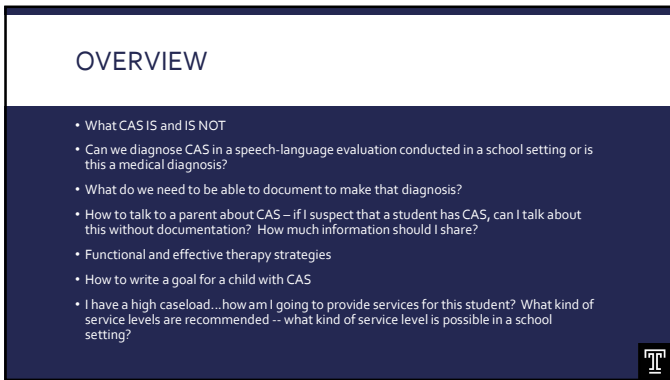

Type ONE WORD in the question box to describe CAS

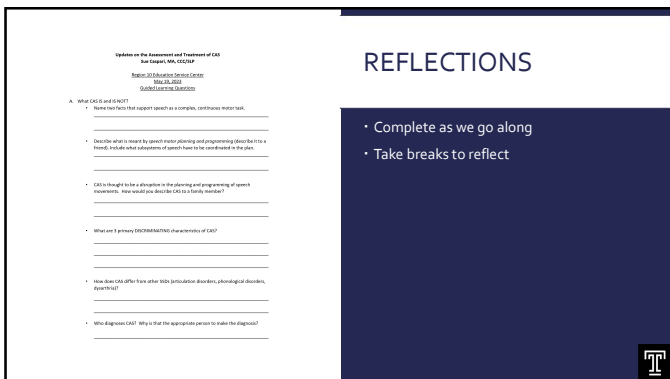

3

4

5

6

A) UNDERSTANDING CAS

- What CAS IS and IS NOT
- Can we diagnose CAS in a speech-language evaluation conducted in a school setting or is this a medical diagnosis?
- What do we need to be able to document to make that diagnosis?
- How to talk to a parent about CAS – if I suspect that a student has CAS, can I talk about this without documentation? How much information should I share?
- Functional and effective therapy strategies
- How to write a goal for a child with CAS
- I have a high caseload...how am I going to provide services for this student? What kind of service levels are recommended -- what kind of service level is possible in a school setting?

7

SPEECH AS A MOTOR TASK

Complex. Continuous. Planned.

8

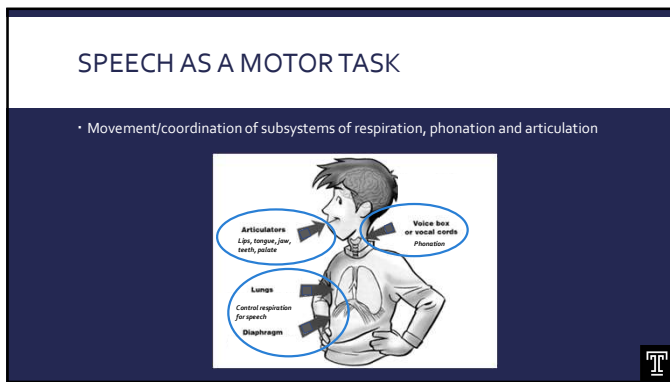

SPEECH

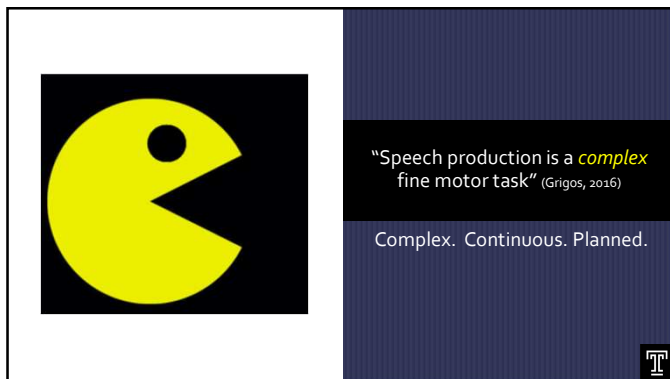

9

10

11

12

13

14

15

HOW PRECISE?

(Raphael, Borden & Harris, 2011)

The diagram features two rounded rectangular boxes, one dark blue with the word 'BIG' in white and one light blue with the word 'PIG' in white. Two curved arrows connect the top of the 'BIG' box to the top of the 'PIG' box, and two curved arrows connect the bottom of the 'BIG' box to the bottom of the 'PIG' box, suggesting a comparison or relationship between the two words.

16

CONTINUOUS

The word 'CONTINUOUS' is centered in white capital letters on a dark blue background.

17

CONSONANTS

/t/ /k/

The diagrams show a sagittal cross-section of the human mouth. The left diagram shows the tip of the tongue touching the alveolar ridge, labeled with the phonetic symbol /t/. The right diagram shows the back of the tongue touching the soft palate (velum), labeled with the phonetic symbol /k/.

18

19

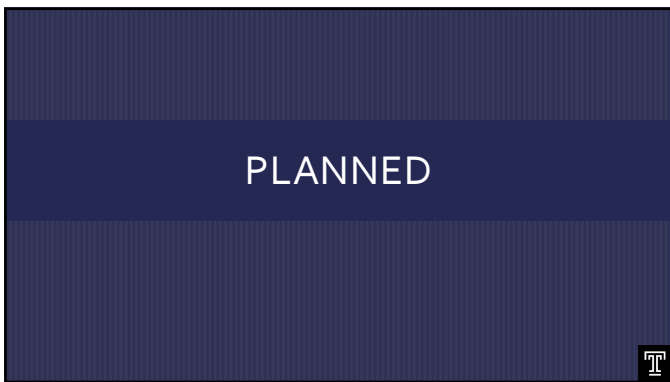

20

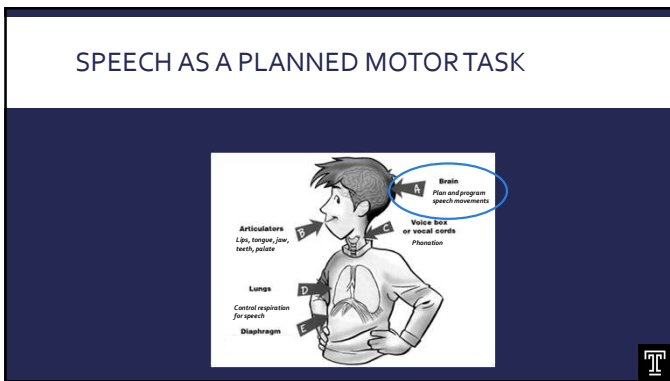

21

22

23

24

RANDOM MOVEMENTS

25

PLANNED MOVEMENTS

26

PLAN THEN EXECUTE

27

PLAN THEN EXECUTE

The slide features a white header with the text "PLAN THEN EXECUTE". Below the header, on a dark blue background, there are two images. On the left is a page of handwritten musical notation. On the right is a photograph of a group of dancers in colorful costumes performing on a stage. A small logo is in the bottom right corner.

28

PLAN THEN EXECUTE

The slide features a white header with the text "PLAN THEN EXECUTE". Below the header, on a dark blue background, there are two images. On the left is a diagram of a golf swing with labels: "UNDESIRABLE" (over the top), "DESIRABLE" (square), and "UNDESIRABLE" (under the top). On the right is a photograph of a golfer in mid-swing on a golf course. A small logo is in the bottom right corner.

29

RANDOM MOVEMENTS IN SPEECH

The slide features a white header with the text "RANDOM MOVEMENTS IN SPEECH". Below the header, on a dark blue background, there is a photograph of a baby in a pink shirt playing with colorful toys. A small logo is in the bottom right corner.

30

31

PLAN THEN EXECUTE

• Example of coordinated, sequenced PLANNED speech movements

	/b/	/f/	/n/
Jaw	Open slightly	Open slightly	Slightly open
Lips	Pressed together	Open, slightly retracted	Open, slightly retracted
Tongue	Neutral, starting to tense	Blade slightly elevated near alveolar ridge, tense	Tip to alveolar ridge
Velum	Elevated	Elevated, starting to lower	Lowered
Vocal Cords	Vibrating	Vibrating	Vibrating

"bean"

32

WHAT IS CAS?

Disruption in the motor PLAN for speech movements

33

IN CAS THE "MOTOR PLAN" IS DISRUPTED

34

PLAN THEN EXECUTE

• What happens when the plan is errored?

	/b/	/f/	/n/
Jaw	Open slightly	Open slightly	Slightly open
Lips	Pressed together	Open, slightly retracted	Open, slightly retracted
Tongue	Neutral, starting to tense	Blade slightly elevated near alveolar ridge, tense	Tip to alveolar ridge
Velum	Elevated Lowered	Elevated, starting to lower	Lowered
Vocal Cords	Vibrating	Vibrating	Vibrating

35

PLAN THEN EXECUTE

• What happens when the plan is errored?

	/b/	/f/	/n/
Jaw	Open slightly	Open slightly	Slightly open
Lips	Pressed together	Open, slightly retracted	Open, slightly retracted
Tongue	Neutral, starting to tense	Blade slightly elevated near alveolar ridge, tense	Tip to alveolar ridge
Velum	Elevated	Elevated, starting to lower	Lowered
Vocal Cords	Vibrating	Vibrating	Vibrating

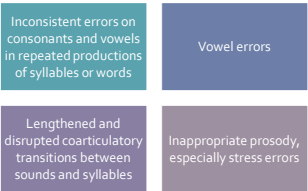

36

DEFINITION

- "Childhood apraxia of speech (CAS) is a neurological childhood (pediatric) speech sound disorder in which the precision and consistency of **movements underlying speech** are impaired . . . The core impairment in planning and/or programming spatiotemporal parameters of movement sequences **RESULTS IN** errors in speech sound production and prosody" (ASHA 2007)

37

KEY FEATURES OF CAS (ASHA, 2007)

38

DISCRIMINATING CHARACTERISTICS

- Characteristics most discriminative of CAS
 - Vowel distortions
 - Inconsistency of word over repeated trials
 - Prosodic errors (stress errors or pauses between sounds or syllables)
 - Groping and/or trial and error behavior
 - Voicing contrast errors
 - Intrusive schwa
 - Awkward movement from one articulatory configuration to another
 - Consonant distortions

(Strand, 2019)

39

WHAT CHARACTERISTICS DO YOU HEAR/SEE?

- Vowel distortions
- Inconsistency of word over repeated trials
- Prosodic errors (stress errors or pauses between sounds or syllables)
- Groping and/or trial and error behavior
- Voicing contrast errors
- Intrusive schwa
- Awkward movement from one articulatory configuration to another
- Consonant distortions

https://www.youtube.com/watch?v=CE0y3APLA-g&t=2458ab_channel=MayoClinic

40

WHAT CHARACTERISTICS DO YOU HEAR/SEE?

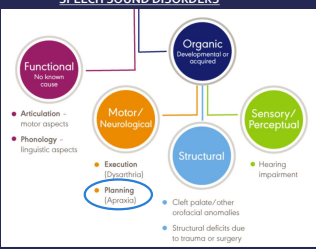

- Vowel distortions
- Inconsistency of word over repeated trials
- Prosodic errors (stress errors or pauses between sounds or syllables)
- Groping and/or trial and error behavior
- Voicing contrast errors
- Intrusive schwa
- Awkward movement from one articulatory configuration to another
- Consonant distortions

41

CAS IS A TYPE OF SPEECH SOUND DISORDER

SPEECH SOUND DISORDERS

ASHA Practice Portal:
<https://www.asha.org/practice-portal/clinical-topics/articulation-and-phonology/>

42

HOW CAS DIFFERS FROM OTHER SPEECH SOUND DISORDERS

Apraxia	Phonological	Dysarthria	Articulation
Inconsistent errors	Predictable pattern of errors	Generally consistent errors	Consistent specific sound errors
No swallowing issues	No swallowing issues	Swallowing often affected	No swallowing issues
No weakness	No weakness	Weakness of musculature	No weakness

More detailed comparison chart found in Handout 3

43

WHO DIAGNOSES CAS?

44

WHO DIAGNOSES CAS?

45

It is the certified speech-language pathologist who is responsible for making the primary diagnosis of CAS, for designing and implementing the individualized and intensive speech-language treatment programs needed to make optimum improvement, and for closely monitoring progress (ASHA Position Statement on CAS, ASHA, 2007)

<https://www.asha.org/policy/PS2007-0027/>

46

Updates on the Assessment and Treatment of CAS
Sue Caspari, PhD, CCC-SLP
Region 10 Education Service Center
5500 Lakeside
Dallas, TX 75243

What CAS is and is NOT

Describe what is meant by speech motor planning and programming (describe it as a process, include other subsystems of speech that may be in coordination in the plan)

CAS is thought to be a disruption in the planning and programming of speech movements. How would you describe CAS to family members?

What are 3 primary DISCRIMINATING characteristics of CAS?

How does CAS differ from other SSS (articulation disorders, phonological disorders, dyslexia)?

Who diagnoses CAS? Why is that the appropriate person to make the diagnosis?

REFLECTIONS "A"

47

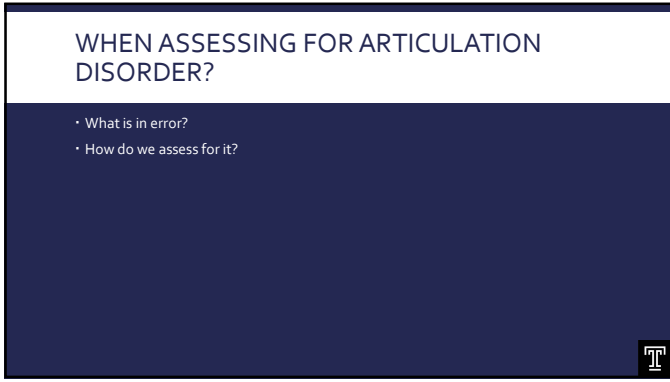

B) DIAGNOSING CAS

- What CAS IS and IS NOT
- Can we diagnose CAS in a speech-language evaluation conducted in a school setting or is this a medical diagnosis?
- What do we need to be able to document to make that diagnosis?**
- How to talk to a parent about CAS – if I suspect that a student has CAS, can I talk about this without documentation? How much information should I share?**
- Functional and effective therapy strategies
- How to write a goal for a child with CAS
- I have a high caseload...how am I going to provide services for this student? What kind of service levels are recommended -- what kind of service level is possible in a school setting?

48

49

50

51

WHEN ASSESSING FOR CAS?

- What is in error?
- How do we assess for it?

52

CRITICAL COMPONENT IN CAS ASSESSMENT

Motor Speech Assessment

- Documents the discriminating characteristics of CAS
 - ?
 - ?
 - ?
 - ?

53

STATIC MOTOR SPEECH ASSESSMENT

Static Assessment – evaluates the system without support

(Vgotsky, 1978; Bain & Olswang, 1995)

54

STATIC MOTOR SPEECH ASSESSMENT 

"Say /pa/"

Cannot Produce  Accurate Independently 

However, the skill may be newly established or long established 

55

DYNAMIC MOTOR SPEECH ASSESSMENT

Dynamic Assessment – evaluates the system when given support

(Vgotsky, 1978; Bain & Olswang, 1995) 

56

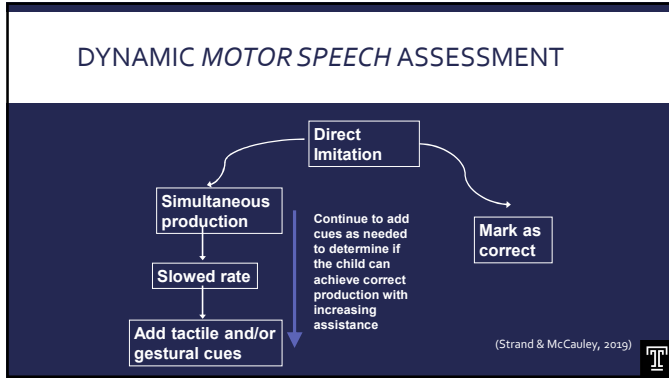

DYNAMIC MOTOR SPEECH ASSESSMENT 

"Say /pa/"

Cannot Produce  Accurate with Max cues  Accurate with Mod cues  Accurate with Min cues  Accurate Independently 

Determine how close to "established" the learning is by manipulating the amount of cues 

57

58

- ### DYNAMIC MOTOR SPEECH ASSESSMENT
- Make your own – do NOT need a "test"
 - List of syllables and syllable sequences at increasing levels of length and complexity
 - Tailor to the child's level
 - Simpler syllable shapes for more impaired child, Longer syllable shapes for less impaired child
 - Engage the child in imitation and cue to assess ease of ability to improve
 - Score for key features of CAS
 - Vowel errors
 - Inconsistencies
 - Prosody errors – segmentation, stress errors
 - Make note of other features observed
 - Make a judgement about severity and prognosis based on weight of evidence

59

DYNAMIC MOTOR SPEECH ASSESSMENT ADVANTAGE - 1

- See characteristics you may NOT see in connected speech or in static assessment
 - In connected speech and static assessment, the child says what they can say or what has habituated with errors
 - In dynamic assessment, when cued, the child may more actively attempt the correct movement – revealing groping, segmentation, timing errors or other CAS characteristics

60

DYNAMIC MOTOR SPEECH ASSESSMENT ADVANTAGE - 2

- Better judge severity and prognosis
- Mild severity and good prognosis
 - If child produces accurate movements with min-mod cues
 - Evidence they can quickly benefit from therapy
- More severe and more guarded prognosis
 - If child requires max cues to accurately produce target or fails to improve even with cueing

61

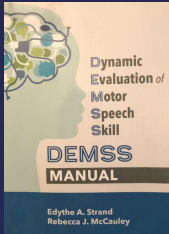

DYNAMIC MOTOR SPEECH ASSESSMENT ADVANTAGE - 3

- Helps with treatment planning
- Learn types of cues that are likely to facilitate improvements in treatment
- Helps with choice of targets/optimum challenge level
 - Syllable length where child is breaking down
 - Sounds the child has in their phonetic inventory (including vowels)

62

DYNAMIC EVALUATION OF MOTOR SPEECH SKILL (DEMSS) (Strand, et al, 2013; Strand & McCauley, 2019)

63

DYNAMIC EVALUATION OF MOTOR SPEECH SKILL (DEMSS) (Strand, et al, 2013; Strand & McCauley, 2019)

- 3+ years (with severe impairment)
 - Suspect they will have difficulty producing words between 1-3 syllables in length
- Repeat real words 1-3 syllables in length (VC, CV, CVC, CVCV, 3 syllable)
 - Mostly early- & middle-developing consonants and all vowels & diphthongs
 - No consonant clusters
- Cue errors, and listen for key features of CAS
 - Inconsistencies, vowel errors, prosodic errors, and judge overall articulatory accuracy
- Criterion referenced assessment
 - Calculate a "score" and compare it with a range of scores associated with increasing likelihood that performance is consistent with CAS
- Probability of correct classification of CAS (average sensitivity) – 94%
 - Unlikely to over-diagnose, but a few children with CAS may not be identified

64

Model	Use a moderate to slightly slow, but natural, rate and natural prosody
Direct	Direct the child's attention to your face
Instruct	Give specific instructions: "Watch my face and then try to say what I say. I will help you if it is a hard one."
Cue	Provide systematic cueing as child makes repeated attempts at productions of words
Score	Score for key features of CAS

DEMSS

65

DEMSS

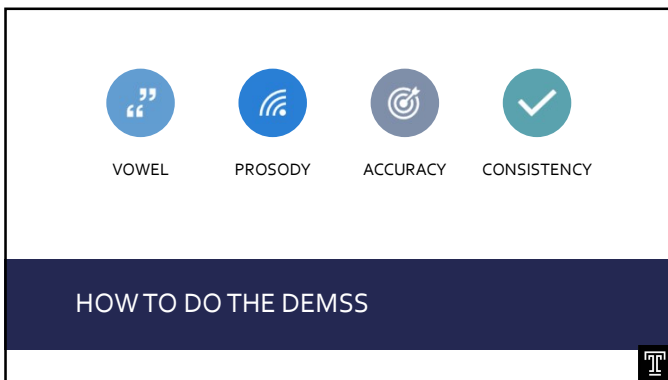

- When you are finished - you have profile of child's abilities at different syllable lengths

Summary Scores					
	(Number of words/items)	Vowel Accuracy	Prosodic Accuracy	Overall Accuracy	Consistency
A. Consonant-vowel	(10)	35	34	35	8
B. Vowel-consonant	(10)	20	39	39	10
C. Reduplicated syllables	(4)	7	3	14	
D. CVC?	(6)	32	13	13	2
E. CVCV	(10)	20	37	37	8
F. Bisyllabic 1	(8)	10	1	21	
G. Bisyllabic 2	(8)	14	8	25	
H. Multisyllabic	(6)	12	2	4	0
Number of items		(60 items)	(24 items)	(40 items)	(42 items)
Range of scores		(0-120)	(0-24)	(0-240)	(0-42)
Totals		113	77	194	22
Overall Total Score				352	High possible score = 420

66

67

68

69

HOW TO SCORE THE DEMSS

- Prosodic accuracy – scored on first attempt
 - 1 = correct
 - 0 = incorrect

Prosodic Error Types	
1. Segmented	
2. Equal stress	
3. Incorrect stress	
4. Weak syllable deletion	
5. Added syllable	

70

HOW TO SCORE THE DEMSS

- Overall articulatory accuracy – scored after all cued attempts
 - 4 = accurate on first attempt
 - 3 = consistent developmental substitution error on first attempt (e.g., /t/ for /k/; /w/ for /r/) without slowness or distortion of movement gestures
 - 2 = correct after one cued trial or after immediate self-correction
 - 1 = correct in direct imitation after additional cued trials
 - 0 = incorrect in direct uncued elicitation after all cued attempts

71

HOW TO SCORE THE DEMSS

- Consistency – scored after all cued attempts
 - 1 = consistent across all trials
 - 0 = inconsistent across any 2 or more trials

72

OTHER OBSERVATIONS ON THE DEMSS

Note					
Inconsistent voicing errors		Trial or error		Difficulty with multisyllabic words	
Groping		Vowel or consonant distortion		Awkward movement transitions	
Intrusive schwa		Lexical stress errors			
Slow rate		Segmentation			

73

PRACTICE SCORING THE DEMSS 7 YEAR OLD MALE – CV, 3-SYLL

- Practice
 - Have child say target
 - Score vowel/prosody
 - Dynamic cueing up to 6 more trials (any cues allowed)
 - Obtain a final trial without cues in direct imitation
 - Score consistency and accuracy after all trials

74

PRACTICE SCORING THE DEMSS 7 YEAR OLD MALE - CV

	Initial Attempt		After Cueing		
	Vowel Accuracy (score 2, 1, 0)	Prosodic Accuracy (score 1 or 0)	Articulatory Accuracy (score 4, 3, or 2)	Articulatory Accuracy (score 2, 1, or 0)	Consistency (score 1 or 0)
Me					
Toy					

Strand & McCauley, 2019

75

PRACTICE SCORING THE DEMSS 7 YEAR OLD MALE – 3 SYLLABLE WORDS

	Initial Attempt		After Cueing		
	Vowel Accuracy (score 2, 1, 0)	Prosodic Accuracy (score 1 or 0)	Articulatory Accuracy (score 4, 3, or 2)	Articulatory Accuracy (score 2, 1, or 0)	Consistency (score 1 or 0)
Potato					
Video					

Strand & McCauley, 2019

76

Summary Scores

	(Number of words/items)	Vowel Accuracy	Prosodic Accuracy	Overall Accuracy	Consistency
A. Consonant-vowel	(10)	18		36	8
B. Vowel-consonant	(10)	20		35	10
C. Reduplicated syllables	(4)	7	3	18	0
D. CVC1	(6)	12		18	2
E. CVC2	(10)	20		30	8
F. Bisyllabic 1	(6)	10	1	21	
G. Bisyllabic 2	(8)	16	8	25	0
H. Multisyllabic	(6)	12	3	7	0
Number of Items	60 items	(24 items)	(60 items)	(42 items)	(0-41)
Range of scores	(0-120)	(0-24)	(0-240)	(0-41)	
Totals	113	17	66	24	
Overall Total Score			332	422	

(Prosodic score types are for descriptive purposes)

Prosodic error types	Segmentation	Equal stress	Incorrect stress	Weak syllable deletion	Added syllable
Reduplicated syllables (4)	X				
Bisyllabic 1 (6)	X				
Bisyllabic 2 (8)	X				
Multisyllabic (6)	X				

Strand & McCauley, 2019

77

SCORING RANGE

• Compare child's SCORE with a range of scores associated with increasing likelihood that performance is consistent with CAS

0 ----- 426

78

DYNAMIC MOTOR SPEECH ASSESSMENT SUMMARY

- Use the DEMSS or make your own
- List of syllables and syllable sequences at increasing levels of length and complexity
- Tailor to the child's level
- Ask the child to imitate each word
- If errored, cue several times to try to obtain a correct production
- Score for key features of CAS
 - Vowel accuracy
 - Prosodic Accuracy
 - Consistency

82

MAKE YOUR OWN MOTOR SPEECH ASSESSMENT

Spanish Assessment

Word (IPC)	Attempt 1		Attempt 2 and on

83

DYNAMIC MOTOR SPEECH ASSESSMENT SUMMARY

Strengths

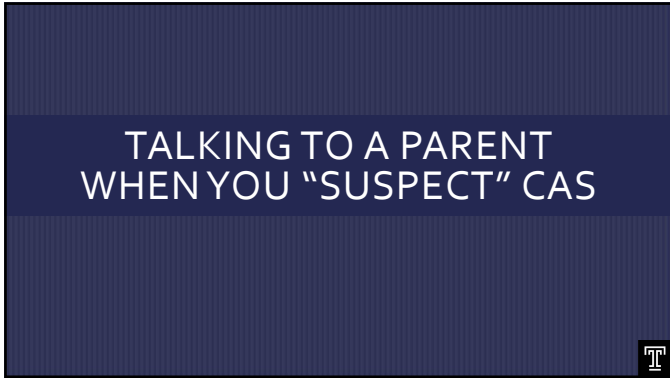

- Helps identify key features of CAS
- Differential diagnosis
- Supports treatment planning
- Enables you to identify the syllable length at which the child is breaking down
- Determine what cues are most helpful
- Enables you to determine how stimutable the child is
- Prognostic indicator

Weaknesses

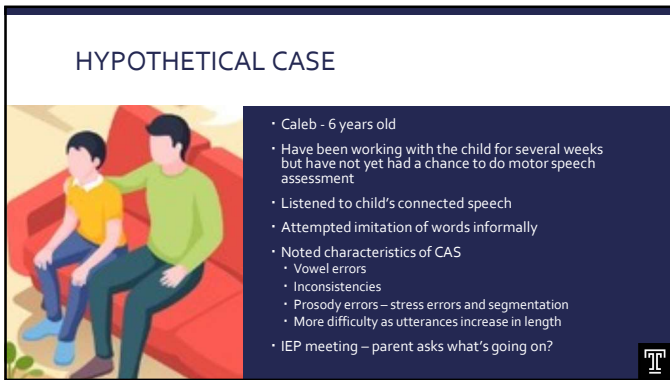

- Can take a long time for some kids
- Requires the child to "work" – you need to provide reinforcers to keep them going

84

85

86

87

• "...differential diagnosis of CAS in [some cases] may require provisional diagnostic classifications, such as CAS cannot be ruled out, signs are consistent with CAS, or suspected to have CAS."
<https://www.asha.org/policy/PS2007-00277/>

88

8. Diagnosis
 A single speech assessment is often for making the diagnosis of CAS. What other information do you need to complete a final speech assessment?

• The Dynamic Evaluation of Native Speech (DENOTES) is a valid native speech assessment because it assesses for what discriminating between /P/ and /B/?

• What does ASHA advise related to provisional diagnosis? (Chapter 10/10/17)

REFLECTIONS "B"

89

C) THERAPY FOR CAS

- What CAS IS and IS NOT
- Can we diagnose CAS in a speech-language evaluation conducted in a school setting or is this a medical diagnosis?
- What do we need to be able to document to make that diagnosis?
- How to talk to a parent about CAS – if I suspect that a student has CAS, can I talk about this without documentation? How much information should I share?
- **Functional, effective and evidence-based therapy strategies**
- **How to write a goal for a child with CAS**
- I have a high caseload...how am I going to provide services for this student? What kind of service levels are recommended -- what kind of service level is possible in a school setting?

90

CAS IS A "TREATABLE" SPEECH SOUND DISORDER
 HTTPS://WWW.ASHA.ORG/PUBLIC/SPEECH/DISORDERS/CHILDHOOD-APRAXIA-OF-SPEECH/

- CAS is not a problem that children outgrow
- A child with CAS will not learn speech sounds in typical order and will not make progress without treatment
- Children with CAS often show little or slow progress in standard therapy (American Speech-Language-Hearing Association, 2007; Campbell, 1999; Hall, 2000; Shriberg, Aram, & Kwiatkowski, 1997)

With early intervention and appropriate therapy, most children with CAS will learn to communicate with their own voices

91

THERAPY STRATEGIES

92

MOTOR-BASED THERAPY FOR CHILDREN WITH CAS

93

THERAPY Focus on Movements

	/b/	/l/	/n/
Jaw	Open slightly	Open slightly	Slightly open
Lips	Pressed together	Open, slightly retracted	Open, slightly retracted
Tongue	Neutral, starting to tense	Blade slightly elevated near alveolar ridge, tense	Tip to alveolar ridge
Velum	Elevated	Elevated, starting to lower	Lowered
Vocal Cords	Vibrating	Vibrating	Vibrating

• Improve movement gestures across the entire word

94

THERAPY Focus on Movements

- Select targets at optimum challenge level – achievable from a MOVEMENT perspective
 - Length
 - Phonotactic complexity
 - Sound inventory
- Cue for accurate movements across the entire word
 - Use movement terms in cueing
 - Include all elements (consonants, vowels, prosody) when cueing
- Goal – to produce the entire utterance/word accurately
 - No consonant errors
 - No vowel errors
 - Correct stress
 - Correct transitions between sounds and syllables (no segmenting or elongations)

95

THERAPY Focus on Movements

- Example
 - Caleb completed a dynamic motor speech assessment
 - Began having errors at the 2-3 syllable level
 - Baby = beebuh, then aby, then upoo
 - Video = viggee, then viggeebu, then eebu
 - Phonetic inventory contained all sounds except /r/ /l/ and /ai/
 - Using primarily CV, CVC and VC syllable shapes in connected speech
 - Select targets at optimum challenge level
 - 2 syllable functional utterances with only sounds in his inventory and with syllable shapes that are slightly above where he is in connected speech
 - Me too, Tommy (brother's name)
 - Practice producing the utterances accurately, errorless learning, fading cues to independence
 - Cue and score for ALL aspects of movement (consonants, vowels, prosody)

96

THERAPY **Focus on Movements**

- Practice listening to errors and giving "movement based" cues

97

THERAPY **Motor Principles**

- Motor-based therapy incorporates principles of motor learning (Maas et al., 2008)
 - Provide frequent and intensive practice of speech targets
 - Focus on accurate speech movement
 - Include external sensory input for speech production (e.g., auditory, visual, tactile, and cognitive cues)
 - Carefully consider the conditions of practice (e.g., mass vs distributed practice; random vs. blocked practice of targets)
 - Provide appropriate types and schedules of feedback regarding performance

98

THERAPY **Motor Principles**

- Given a couple pieces of (simple) music to learn and you practice them over and over again
- Teacher gives *specific* instruction at first
 - How to hold the flute
 - How to move the lips to get a good embouchure for proper tone
 - How to keep the beat and play at the right speed (metronome)
 - How long to hold each note
 - How and when to glide between the notes (slur on one breath) vs. turn breath on and off individually for separate notes
- Teacher uses multiple cueing techniques
 - Verbal instruction
 - Visual – demonstration
 - Auditory – demonstration
 - Tactile – hand over hand
- Teacher sends piece home for daily practice

99

THERAPY Motor Principles

- Small number of pieces of music at any one time
- The high amount of practice trials
- The use of specific feedback when first learning to play
- The use of multiple modalities to provide feedback
- Homework component – distribute practice

100

THERAPY Integral Stimulation

- Integral stimulation approaches are motor-based therapies that have among the strongest evidence to date
- 8 studies, with several from independent research groups, show increases in speech accuracy in children with CAS
 - Baas, Strand, Elmer, & Barbarsi, 2008; Edeal & Gildersleeve-Neumann, 2011; Gildersleeve-Neumann & Goldstein, 2015; Maas et al., 2012; Maas & Farinella, 2012; Maas et al., 2019; Strand & Debertine, 2000; Strand, et al, 2006
- 23 children

101

THERAPY Integral Stimulation

- Integral Stimulation
 - Imitation – repetitive intensive drill - of increasingly longer words and phrases
 - “Watch me, listen and do what I do”
 - Tactile cues
 - Slowed rate
 - Gradual fading of cues
 - Focus on whole-target movement accuracy

102

DYNAMIC TEMPORAL AND TACTILE CUEING (DTTC) (STRAND & STOECKEL, 2006; STRAND, 2019)

- Integral stimulation treatment designed for children with CAS – one of the most studied
- Uses functional, “real words” selected at optimum challenge level
- “Small set” of targets – in order to get a “high amount of practice trials” of each
- “Frequent, shorter sessions” to distribute practice trials
- Adjust practice schedule – mass to varied, blocked to random
- Add/fade supports and adjust elicitation method – simultaneous – direct imitation – delay – spontaneous to allow for “accurate” practice trials – errorless learning

103

DYNAMIC TEMPORAL AND TACTILE CUEING (DTTC) (STRAND & STOECKEL, 2006; STRAND, 2019)

Levels

```

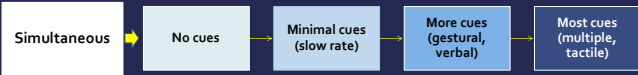

graph TD
  A[Simultaneous] --> B[Direct Imitation]
  B --> C[Delayed Imitation]
  C --> D[Spontaneous]
  
```

104

DYNAMIC TEMPORAL AND TACTILE CUEING (DTTC) (STRAND & STOECKEL, 2006; STRAND, 2019)

Add Cues

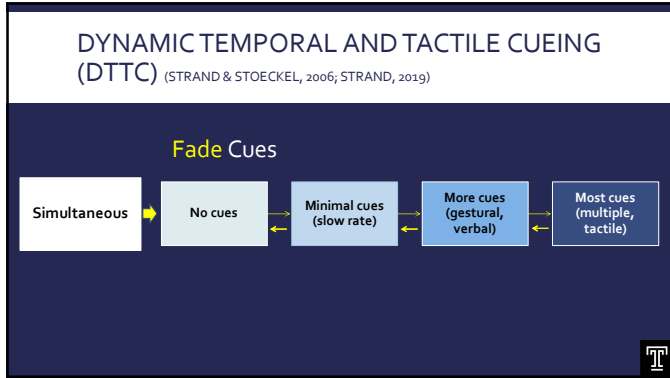

```

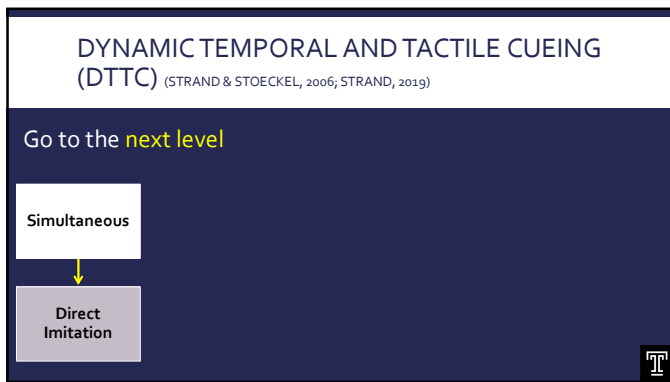

graph LR
  A[Simultaneous] --> B[No cues]
  B --> C[Minimal cues (slow rate)]
  C --> D[More cues (gestural, verbal)]
  D --> E[Most cues (multiple, tactile)]
  
```

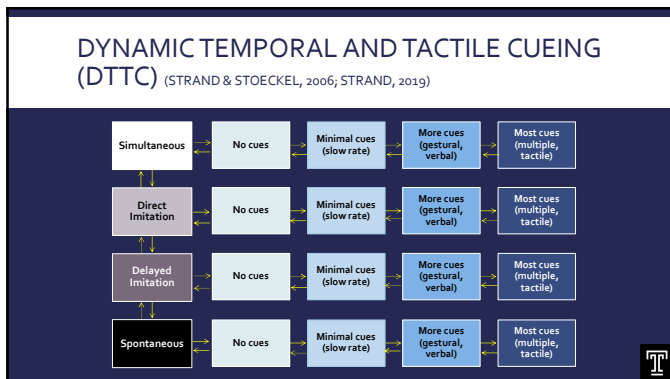

105

106

107

108

COMPARISON

	DTTC	Articulation	Phonological
Number of stimuli	Fewer	Many	Many
Stimuli parameters	Length and phonotactic complexity of utterance (using sounds that are already mastered)	Sounds in error	Phonological patterns in error
Goal	Produce entire utterance correctly (eg produce movement gestures in CVC words accurately so there are no errors in sounds (C&V), sequencing, coarticulation or prosody)	Produce target sound correctly (eg /s/ produced accurately in initial, medial and final word position)	Demonstrate knowledge of the rule (eg final consonants added in words that should have final consonants)

112

SERVICE LEVELS

113

- A high treatment dosage (total amount of treatment) for CAS is consistent with principles of motor learning (Maas et al., 2008, 2014; McNeil, Robin, & Schmidt, 1997).
- Given the need for repetitive production practice in motor speech disorders like CAS, intensive and individualized treatment is often stressed (Hall et al., 1993; Namastivayam et al., 2015; Skinder-Meredith, 2003; Strand & Skinder, 1999).
- For younger children, the frequency and length of sessions may need to be adjusted (e.g., *shorter, more frequent sessions are often recommended* (Skinder-Meredith, 2003))
- Your child [with CAS] may begin with therapy 3-5 times per week.

https://www.asha.org/practice-portal/clinical-topics/childhood-apraxia-of-speech/#collapse_6

114

SERVICE LEVEL

- The more frequently the child receives appropriate therapy, the better his/her long term prognosis

https://www.apraxia-kids.org/apraxia_kids_library/prognosis-for-apraxia-what-does-the-future-hold/

115

CONSIDER . . .

HOW COULD YOU DISTRIBUTE SESSIONS FOR A CHILD WITH CAS IN YOUR SCHOOL?

Time/Day	Mon	Tue	Wed	Thu	Fri			
8:00-8:30	Speech (10 min)		Speech (10 min)	1 st (TEACHER)	K (TEACHER)			
8:30-9:00	Speech (10 min)		Speech (10 min)	Speech (10 min)	Speech (10 min)			
9:00-9:30	Speech (10 min)	Speech (10 min)	Speech (10 min)	Speech (10 min)				
9:30-10:00	Speech (10 min)	Speech (10 min)	Speech (10 min)	Speech (10 min)	Speech (10 min)			
10:00-10:30	Speech (10 min)	Speech (10 min)	Speech (10 min)	Speech (10 min)	Speech (10 min)

IDEAS

- Collaborate with Reading teacher
 - Send them mastered targets for distributed practice
- Drive-by – grab kids when you can
 - AM while other kids are taking off boots, getting settled
- "Speech" centers when the kids divide up into centers in the classroom
- Teletherapy
 - More frequent sessions easier
 - Shorter sessions easier
- Education to administrators
 - Address needs now may reduce needs later on
 - Not a large percentage of kids who have CAS

117

GOALS

118

ARTICULATION DISORDER

<p>Problem</p> <p>One or two sounds in error – usually place or manner errors</p>	<p>Goal?</p> <ol style="list-style-type: none"> 1. Focus on all aspects of the movement during production of the utterance – consonant accuracy plus vowel accuracy plus prosody (transitions between sounds and syllables, and stress) 2. Focus on producing the errored sound(s) correctly (place and manner) in different word positions 3. Focus on accurately producing developmentally appropriate phonological patterns
--	--

119

PHONOLOGICAL DISORDER

<p>Problem</p> <p>Child displays several predictable phonological patterns errors that are not developmentally appropriate (eg, final consonant deletion, fronting, weak syllable deletion)</p>	<p>Goal?</p> <ol style="list-style-type: none"> 1. Focus on all aspects of the movement during production of the utterance – consonant accuracy plus vowel accuracy plus prosody (transitions between sounds and syllables, and stress) 2. Focus on producing the errored sound(s) correctly (place and manner) in different word positions 3. Focus on accurately producing developmentally appropriate phonological patterns
--	--

120

CHILDHOOD APRAXIA OF SPEECH

Problem	Goal?
Difficulty planning and programming speech movements resulting in segmental (vowels and consonants) and suprasegmental (transitions between sounds and syllables, and stress) errors throughout the entire utterance	<ol style="list-style-type: none"> 1. Focus on all aspects of the movement during production of the utterance – consonant accuracy plus vowel accuracy plus prosody (transitions between sounds and syllables, and stress) 2. Focus on producing the errored sound(s) correctly (place and manner) in different word positions 3. Focus on accurately producing developmentally appropriate phonological patterns

121

CAS GOAL

- Caleb will produce the CVC word "home," at the word level in delayed imitation with a total score of 4/6 or higher across three trials, across three consecutive weekly probes.
- Probe scoring
 - 2 = no errors
 - 1 = 1-2 errors
 - 0 = more than 3 errors
- Accuracy is judged on all of the following:
 - Consonant accuracy
 - Vowel accuracy
 - Stress
 - Fluent movements between sounds and syllables (no segmentation)

122

CAS GOAL

- Caleb will produce the CVC word "home," at the word level in delayed imitation with a total score of 4/6 or higher across three trials, across three consecutive weekly probes.
- /hum/ =
 - 1
- /h.im/ =
 - 1
- /i.m/ =
 - 0
- TOTAL = 2/6
- Probe scoring
 - 2 = no errors
 - 1 = 1-2 errors
 - 0 = more than 3 errors
- Accuracy is judged on all of the following:
 - Consonant accuracy
 - Vowel accuracy
 - Stress
 - Fluent movements between sounds and syllables (no segmentation)

123

C. Therapy

- What are the 3 "big reds" thought to be important in motor-based therapy for children with CAS?
- How is a goal for a child with CAS different from a goal for a child with an articulation disorder? How do you know you are working on skills that are phonological disorder the final consonant deletion?
- The principle of motor learning that specifies that "distributed" practice across time, context and content, is more effective than massed practice. How does this guide decisions about service delivery (frequency and length of sessions per week)?

REFLECTIONS "C"

124

RESOURCES

- Continued Education in CAS
 - Apraxia Kids website – apraxia-kids.org
 - Apraxia-Kids Intensive Training (next "boot camp" in 2025)
 - FREE workshops sponsored by the University of Texas at Dallas and the Once Upon a Time (OUAT) Foundation - hosted by Edythe Strand, PhD.
 - <https://childapraxiatreatment.org/learning-opportunities/>
 - Or you can find it on youtube (no CEUs) by searching for "Edy Strand CAS workshop youtube"
 - FREE in-person 2-day intensive trainings sponsored by OUAT at: <https://childapraxiatreatment.org/>
 - Next workshop in Boston, MA, July 21-22, 2023 (apply by May 26) – limited to 50 attendees

125

RESOURCES

- What is CAS
 - ASHA position statement
 - ASHA Practice Portal – childhood apraxia of speech
- Diagnosis
 - McCauley & Strand (2008) – review of motor speech assessments
 - Murray, et al (2020) – systematic review of differential diagnosis of CAS
 - Strand, et al (2013) – motor speech assessment (DEMSS)
- Treatment
 - Maas, et al (2008) – principles of motor learning in CAS
 - Maas, et al (2014) – review of motor-based intervention protocols
 - Strand (2019) – DTTC Tutorial
 - DeThorne, et al (2009) – When "Simon Says" doesn't work: Alternatives to imitation for facilitating early speech development.
 - Stoeckel & Caspari, 2020 – ASHA Perspectives Article on making treatment decisions for CAS

126

FINAL POLL – HOW DO YOU FEEL ABOUT CAS?
