

Discovering Talented 4th-6th Graders with **I-Excel**

I-Excel is a new **online**, above-level test for high-ability 4th-6th graders.

I-Excel, developed by the Belin-Blank Center, offers the research-supported power of above-level testing in a convenient online format. **Testing occurs in the school.**

I-Excel assesses in four areas:

Science
Mathematics
Reading
English

I-Excel discovers exceptionally talented students. Results can be used by educators to develop their students' strengths through recommendations about appropriately challenging curriculum.

I-Excel licenses content developed by ACT that was designed to measure academic progress of junior high students. From that content, the Belin-Blank Center has been identifying the academic talents of bright 4th - 6th grade students for over 20 years.

Who is eligible for I-Excel testing?

4th - 6th grade students who have scored in the top 5% of their age group on at least one section of a nationally-standardized test such as the *Iowa Assessments* are eligible for I-Excel testing.

How much does it cost?

\$45 per student. \$75 if testing fewer than 4 students.

How are students registered for I-Excel testing?

I-Excel, an in-school assessment, is available throughout the school year. One educator is designated as the contact person for the school, and oversees student registration for the testing session. Registration is completed online.

How can I-Excel results be used?

The Belin-Blank Center provides an extensive interpretation of scores allowing educators to make data-driven decisions and differentiate for their students through curricular intervention and enrichment.

Educators receive a group report, which includes information about the group of students tested, plus an individual report for each student. Educators can easily share individual reports with the students' families.

How is I-Excel different from other tests?

Most grade-level tests are not very challenging for gifted students and the scores aren't informative about readiness for advanced work.

I-Excel, a more challenging test, allows gifted students to showcase their talents and results help school personnel tailor educational opportunities to talented and exceptionally talented students.

I-Excel includes an emphasis on connecting testing to STEM subjects in school. Other above-level tests may include only verbal or quantitative sections.

I-Excel advantages:

- Educators schedule testing sessions at a time and place convenient for them and their students.
- Educators and parents do not have to wait for a specific national test date or drive long distances to a centralized testing center.
- Schools may schedule multiple testing dates during the school year.
- Testing can be conducted on weekdays or on weekends.

What are the requirements for computers using I-Excel?

Testing requires a desktop or laptop computer (no iPads, smartphones, or other small mobile devices). For best results, use a high-speed internet connection.

We strongly recommend using Chrome or Firefox as the browser, an external mouse instead of a laptop trackpad, and a wired connection (instead of wireless). It is not necessary to download software in order to use I-Excel.
