Database Export Utility - For PC and Mac

If this is the first time using this utility, please print out and read the detailed instructions before attempting to export a database.

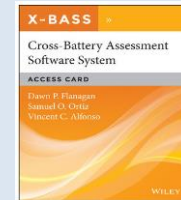

This program will export databases only from the following versions of X-BASS:

Print Brief Instructions

Read Detailed Instructions

X-BASS v1.0 - For PC-Windows.xlsm
X-BASS v1.0.052015 - For PC-Windows .xlsm
X-BASS v1.0.062015 - For PC-Windows.xlsm
X-BASS v1.0 - For MacOS.xlsm
X-BASS v1.0.052015 - For MacOS.xlsm
X-BASS v1.0.062015 - For MacOS.xlsm

Export X-BASS Database

Brief Instructions and Notes:

1. Ensure that the Utility Program has been copied to the same folder/directory as your current version of X-BASS.
 2. Open the Utility Program and then open the version of X-BASS (v1.0 or 1.0.XXXXXX) that contains your existing database. Do not open the new version (v1.1) yet. It is best to open X-BASS by using the Excel "File/Open..." command sequence to select it. Problems may result if you open X-BASS by selecting it from a list of "recently opened files" or by double-clicking on it from a separate navigation window.
 3. Ensure that "Macros are Enabled" (when the files are opened AND whenever you're prompted to do so) and that the file is not in "Protected Mode."
 4. Click the blue "Export X-BASS Database" button above and then click "Ok" for the version of X-BASS that has the database you want to export.
- If you get a message stating that "A correct version of X-BASS 1.0 was not open...", close all programs and try again. If you changed the name of your version of X-BASS, close it and rename it as one of the names above, or perform a "Save As..." and rename it exactly as listed above. Then, re-open the newly renamed X-BASS by following the instructions in Step 2 and try again.
- If you get a message stating that "Workbook links need to be updated...", just click on "Don't Update" and continue.
5. When the database has been successfully exported, close the Utility Program (the old version of X-BASS will be closed by the utility program).
 6. Open the new version of X-BASS (v1.1 or higher). Use the "Import Saved Database" button on the Start tab to import the database.

For a full view of the instructions, adjust your window to the same width as the line below.
